WORK EXPERIENCE

JUL 2019 - PRESENT

Freelance Web Developer
H.E.A.L.P

Designed a full-stack web application to replace H.E.A.L.P's current client-tracking system, as well as created scripts to generate forms and invoices based on specified data.

- Parsed 300+ client statistics using Google Sheets API
- Created a Go server and REST-ful API that connects to MongoDB
- Designed a front-end using ReactJS to interact with the Go API

JAN 2019 - JUNE 2019

Software Engineering Intern
UCSC Baskin School of Engineering

(CISCO) Implemented an open-source full-stack web application for cloud-native applications that allows users to configure various plugin integrations and generate Go template code.

- Created a NodeJS server and a Websocket connection to sync from Etcd
- Developed microservices using Docker and Kubernetes
- Followed the Scrum/Agile framework

EDUCATION

JUNE 2019 BA COMPUTER SCIENCE, **University of California, Santa Cruz**

RELATED COURSES: Data Structures, Algorithms, Computer Networks, Network Programming, Databases, Distributed Systems, Software Engineering

PROJECTS

Portfolio - *ReactJS, Reactstrap, HTML, CSS, Git*

Built a front-end application that displays my current progress as a software engineer. Lighthouse analysis of a 93, mobile-friendly, and properly structured JavaScript, HTML, CSS, and assets files.

SKILLS

Languages: Go, JavaScript, Python, Java, HTML, CSS, SQL
Libraries: ReactJS, Express, Flask, CN-Infra
Data Stores: MongoDB, PostgreSQL, Etcd
Tools/Platforms: Git, Docker, Kubernetes, TravisCI, Dep, Linux
